

scale-X™ carbo bioreactor system

Intensified fixed-bed technology for cost-effective & scalable viral production

scale-X [carbo]

Bench-scale automated cell culture system for expression and concentration of viral drug substance, suited for rapid process development and cost-effective clinical production. The scale-X[™] carbo system features a modular, scalable, fixed-bed bioreactor designed for enhanced upstream processing of viral products.

Cost-effectiveness

Low-footprint integrated system delivering high cell densities & viral titers

▶ Optimized capital investment & production costs

Reliability

Homogeneous cell distribution throughout the fixed-bed

- ▶ Provides consistency within & among batches
- ➤ Automated process control

Scalability

Predictable cell & product behavior

- ▶ Reduced risk in process transfer
- ➤ Simplified process development
- ▶ Seamless scale-up

Applications

- Viral vaccines
- Viral vectors
- Oncolytic viruses

Scales

- ▶ 10 m² and 30 m² of available growth surface
- ➤ Suited from R&D to clinical production

AUTOMATED PROCESS CONTROL

Controller

Advanced process control functionalities for protocol execution & standard parameter monitoring

Benchtop system

Ease of use in laminar flow or biosafety cabinet, docking slots for single-use components

Sensors

pH, Dissolved Oxygen, temperature, pressure and fluid levels

Sampling

Fixed-bed and media sampling for cells and metabolite profiling

Quick access screen

Key parameters display & manual pump control

High-density fixed-bed bioreactor

Single-use bioreactor with novel structured design for reliable & scalable production

Growth surface

Treated micro-fabric with alternate spacer netting, assembled as spiral-wound structure

- ▶ Rapid & homogeneous cell entrapment of both adherent and suspension cell lines
- ► Homogeneous media flow & nutrients availability

Scalability by design

- Constant linear velocity of fluids and even distribution through the fixed-bed ensure a smooth scale-up
- ▶ Bubble-free aeration mechanism provides high gas mass transfer coefficient while minimizing stresses

In-line concentration

Delivering continuously concentrated harvest for simplified purification

Hollow fiber tangential flow filtration

- Plug-and-play, 1300 cm² cartridge & pre-assembled manifolds
- Automated process control

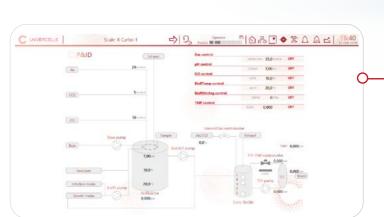

Mobile workstation & Wonderware[©] system platform

- ▶ Process protocol upload
- ▶ Data recording & reporting
- Operates one or two controllers in parallel

Manifolds & bottles

Complete set of consumables for media circulation, automated adjustment and sampling

 Tubing manifolds pre-assembled on bioreactor for easy set-up

scale-X [carbo]

DELIVERING INTENSIFIED PRODUCTION

The scale-X carbo bioreactor offers a significant increase of the surface/volume ratio compared to conventional technologies:

- ▶ 10 m² growth surface in 1.8 L working volume
- ▶ 30 m² growth surface in 4.2 L working volume

Cost-efficient & reliable operations

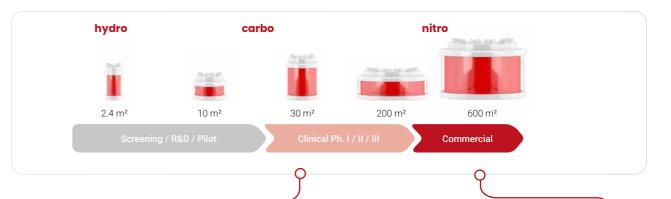

- Reduced consumables, media & utilities consumption
- Simplified manual operations

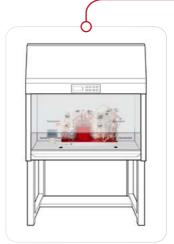

Optimized capital investment

- Simplified equipment
- & infrastructure

A BROAD RANGE OF SOLUTIONS FROM DISCOVERY TO COMMERCIAL STAGE

The scale-X family is designed to ensure seamless scalability from early process development to commercial manufacturing. The fixed-bed structure provides a high surface area available for cell culture in a very low footprint, while delivering similar fluid conditions at all scales, thus ensuring predictable cell & product behavior.

scale-X carbo is the perfect tool for R&D activities and clinical material production

Benefiting from a low footprint, the scale-X carbo system can be used in a laminar flow or biosafety cabinet, providing production capacity for R&D to clinical applications.

 \blacktriangleright 800 x 300 x 500 mm for a total 0.24 m² footprint

Chaining upstram and midstream processing

The NevoLine™ Upstream platform delivers a concentrated clarified bulk product for clinical and commercial manufacturing.

Process intensification and chaining integrated in a 3 m² automated platform for for rapid deployment of low-CAPEX facilities.

Control unit

Controller	Description	PLC-based Siemens® TIA S7-1200 control system with a local HMI control			
	Automation design	Developed and tested according to Gamp5 standard			
	Dimensions (W x D x H)	800 × 300 × 500 mm			
	Net weight (empty)	30 kg			
	Net weight (including largest consumable liquid filled)	40 kg			
	Material	Painted stainless steel			
	Heating	Heating docking station			
	Agitation	Bioreactor heating range: room temperature to 37°C			
	Agitation	Magnetic agitation plate (0-1500 RPM)			
	Pumps & flow rate range	 Bioreactor IN: Watson-Marlow™ 114; 0-141 mL/min Bioreactor OUT: Watson-Marlow 114; 0-141 mL/min 			
		Base, Watson-Marlow 114; 0-42 mL/min TFF: Watson-Marlow 313; 0-900 mL/min			
Probes & sensors	Dissolved oxygen	1 x Hamilton® VisiFerm® DO Arc probe (autoclavable) 120 mm (carbo 10 m²); 225 mm (carbo 30 m²)			
	рН	1 x Hamilton EasyFerm® plus HB Arc probe (autoclavable) 120 mm (carbo 10 m²); 225 mm (carbo 30 m²)			
	Temperature	1 x PT-100 Temperature probe (0-50°C)			
Quick access screen	Description	4" color touch screen HMI (Human Machine Interface) for parameters visualization & samplin			
HMI)	Becomption	command			
• •	Communication	Ethernet port RJ45 connected to the controller			
Power, data &	Location	Outside of BSC/LAF, within a 2-meter distance			
gas management box	Materials of construction	Painted steel			
	Dimensions (W x D x H)	300 × 160 × 600 mm			
	Weight	15 kg			
	Gas	Gas Process air, CO ₂ and O ₂ (up to 200 mL/min)			
Jtility requirements	Electrical supply	110 to 230 V			
	Power consumption	650 W			
Mobile workstation (SCADA)	Description	Mobile workstation with Wonderware SCADA software interface; PLC-based control system Siemens S7 Tia Portal			
	Automation design	Developed and tested according to Gamp5 standard			
	Network compatibility	Network connection available for Company network			
	Data export	SQL-based structure, CSV format data export			
Single-use compon	ents				
ixed-bed bioreactor		carbo 10 carbo 30			
Vessel	Available growth surface (m²)	10 30
