

scale-X™ carbo bioreactor system

Intensified fixed-bed technology for cost-effective & scalable viral production

UNIVERCELLS Technologies

Overview

UNIVERCELLS

scale-X^T[carbo]

Bench-scale automated cell culture system for expression and concentration of viral drug substance, suited for rapid process development and cost-effective clinical production. The scale-X[™] carbo system features a modular, scalable, fixed-bed bioreactor designed for enhanced upstream processing of viral products.

Cost-effectiveness

Low-footprint integrated system delivering high cell densities & viral titers

Optimized capital investment & production costs

Reliability

Homogeneous cell distribution throughout the fixed-bed

- Provides consistency within & among batches
- Automated process control

Scalability

Predictable cell & product behavior

- ► Reduced risk in process transfer
- Simplified process development
- Seamless scale-up

Applications

- Viral vaccines
- Viral vectors
- Oncolytic viruses

Scales

Overview

▶ 10 m² and 30 m² of available growth surface Suited from R&D to clinical production

AUTOMATED PROCESS CONTROL

Controller

Advanced process control functionalities for protocol execution & standard parameter monitoring

Benchtop system

Ease of use in laminar flow or biosafety cabinet, docking slots for single-use components

Sensors

pH, Dissolved Oxygen, temperature, pressure and fluid levels

Sampling Fixed-bed and media sampling for cells and metabolite profiling

Quick access screen

Key parameters display & manual pump control

108 • * A A = 16:40

Operations supervision

scale-X

Ó

Mobile workstation & Wonderware[®] system platform

- Process protocol upload
- Data recording & reporting
- Operates one or two controllers in parallel

Manifolds & bottles

Complete set of consumables for media circulation, automated adjustment and sampling

 Tubing manifolds pre-assembled on bioreactor for easy set-up

Features

UNIVERCELLS

High-density fixed-bed bioreactor

Single-use bioreactor with novel structured design for reliable & scalable production

Growth surface

Treated micro-fabric with alternate spacer netting, assembled as spiral-wound structure

- Rapid & homogeneous cell entrapment
- Homogeneous media flow & nutrients availability

Scalability by design

- Constant linear velocity of fluids and even distribution through the fixed-bed ensure a smooth scale-up
- Bubble-free aeration mechanism provides high gas mass transfer coefficient while minimizing stresses

In-line concentration

Delivering continuously concentrated harvest for simplified purification

Hollow fiber tangential flow filtration

- ▶ Plug-and-play, 1300 cm² cartridge & pre-assembled manifolds
- Automated process control

scale-X^T[carbo]

DELIVERING INTENSIFIED PRODUCTION

The scale-X carbo bioreactor offers a significant increase of the surface/volume ratio compared to conventional technologies:

- ▶ 10 m² growth surface in 1.8 L working volume
- ▶ 30 m² growth surface in 4.2 L working volume

HYPERStack® 36

Cost-efficient & reliable operations

- Reduced consumables, media & utilities consumption
- Simplified manual operations

Optimized capital investment

 Simplified equipment & infrastructure

UNIVERCELLS Technologies

A BROAD RANGE OF SOLUTIONS FROM DISCOVERY TO COMMERCIAL STAGE

The scale-X family is designed to ensure seamless scalability from early process development to commercial manufacturing. The fixed-bed structure provides a high surface area available for cell culture in a very low footprint, while delivering similar fluid conditions at all scales, thus ensuring predictable cell & product behavior.

Chaining scale-X nitro to downstream

in the NevoLine™ biomanufacturing platform, delivering concentrated bulk product for clinical and commercial manufacturing.

 Process intensification and chaining enable containment in 10 m² isolators or biosafety cabinets, for rapid deployment of low-CAPEX facilities

Scalability
